MESSAGE

BaekSan Propeller Co., Ltd. is a leading manufacturer that specializes in aluminum propellers for the boating industry.

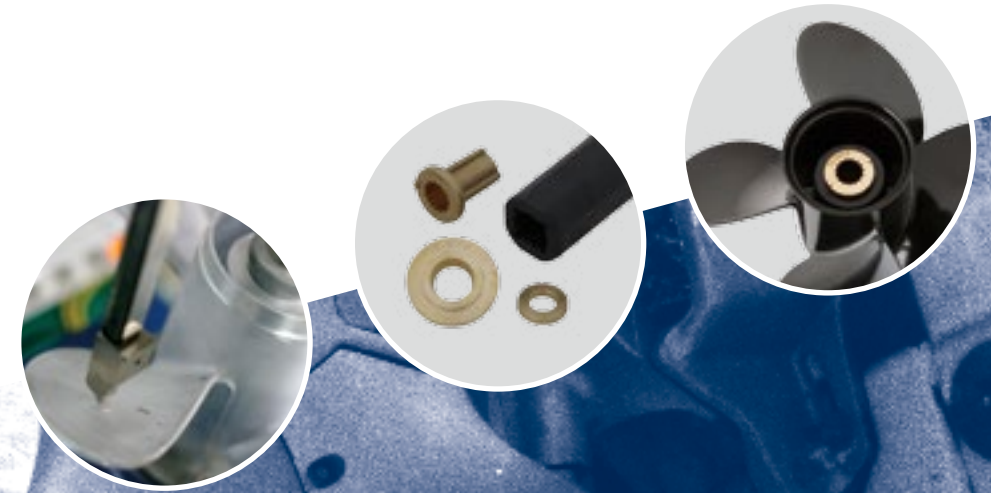

BaekSan Propeller Co., Ltd. was established in 1984 and many years of manufacturing experience has brought us the technical know-how to realize the excellent quality.

Our wide selections of aluminum propellers are being exported to many countries throughout the world under our own brand **BS.PRO** earning the good reputation in every market.

It is no wonder that our market share is rapidly growing worldwide.

Our high performance aluminum propellers for outboard and stern-drive applications provide the strong durability and the strong corrosion resistance.

Our **BS.PRO** propellers will provide you with the pleasure of water leisure sports and the safest and the most comfortable sailing.

Microstructure Inspection of BaekSan Propeller

Rubber Stress / Strain Analysis

Flow simulation

Solidification simulation

HIGH PERFORMANCE ALUMINUM PROPELLER BS.PRO

Cupped trailing edge to better grab and hold water, dramatically enhancing the performance and efficiency.

Anti-singing edge

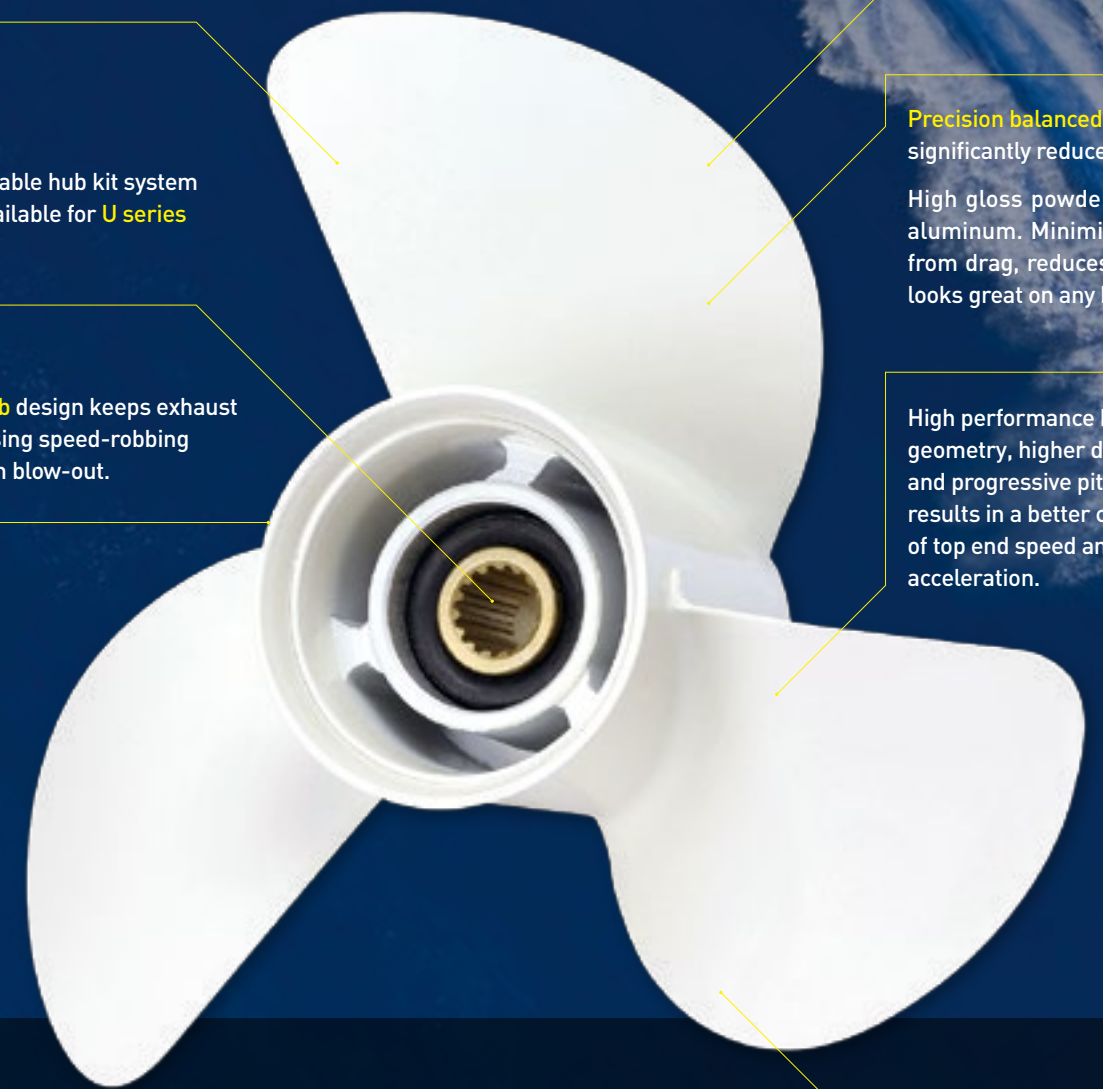

Precision balanced blades significantly reduce vibration.

High gloss powder coat protects aluminum. Minimized speed loss from drag, reduces corrosion and looks great on any boats.

Exchangeable hub kit system is also available for **U series** propeller.

Flared hub design keeps exhaust from causing speed-robbing ventilation blow-out.

High performance blade geometry, higher degree rake and progressive pitch design results in a better combination of top end speed and dead start acceleration.

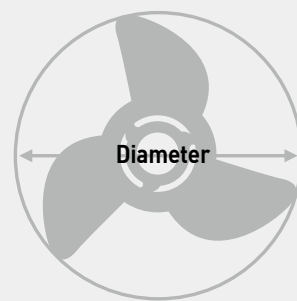

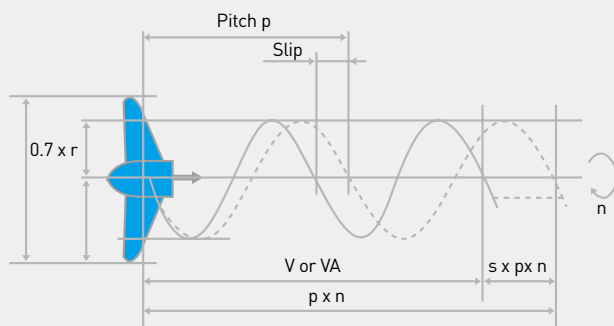

NOTE

4 blade propeller typically give better wave climbing ability and give less torque steer to the operator. Also 4 blade propeller tend to run more smoothly with less vibration over the entire rpm range.

Optimal blade thickness.

Each blade is carefully engineered thin enough to maximize performance but thick enough to provide long lasting durability.

PART NO. SYSTEM

DIAMETER

Y85 13 1/4 X 17

ENGINE / HP PITCH

BaekSan Propeller Co., Ltd. does the constant R&D activity and keeps investing in the equipment to provide the customers with the better quality aluminum propellers. We provide our customers with good service and share the technical information and market information with our customers, and we have our goal oriented to what our customers want.

If you use **BS.PRO** propellers proven as the best quality in the market, your water leisure sports will be much pleasanter and your water transportation will be much safer and more comfortable.

Thruster Propeller

HOW TO CHOOSE THE CORRECT PITCH

01

Check the RPM range recommended by outboard manufacturer in the manual.

02

Check the maximum RPM range by reading the instrument panel to determine the optimal pitch and speed.

03

If maximum RPM exceeds the recommended range, please lower the RPM by using one level higher pitch propeller.

Repeat this procedure to figure out the appropriate pitch propeller.

04

If maximum RPM is lower the recommended range, please raise the RPM by using one level lower pitch propeller.

Repeat this procedure to figure out the appropriate pitch propeller.

Pro's Choice!

HOW TO USE THIS CATALOGUE

- If the original propeller part number (OEM part number) is known and a size or style change is not desired, then check to OEM Part No. on each BRAND pages.
- If the original propeller part number (OEM part number) is not known or a propeller size or style change is desired, use the following procedure for selecting a propeller.

- 1 Locate the BRAND of outboard or sterndrive engine using the table of contents.
- 2 Locate the Horse Power, Engine Model, Year that corresponds with the engine brand.
- 3 Select the propeller Diameter, Pitch that best meets your vessel and usage.
- 4 If you select Hub Kit propeller, Hub Kit indicated must be ordered.

★ not included. Please use O.E.M. parts.
** We also make accessories for rubber bushing propeller.

HOW TO ASSEMBLE HUB KIT WITH PROPELLER

- Image is for reference only.
- Actual components vary depending on application.
- Please refer owner's manual as necessary.
- Please check propeller for tightness before boating.

Pro's Choice!

OUTBOARD PROPELLERS FAQ

3-blade or 4-blade propeller

- 3-blade propeller : We recommend these propellers for recreational boats with 3, 4, and 6 cylinder outboards and I/O engines. These propellers provide good "hole shot" and top-speed performance.

- 4-blade propeller : We recommend these propellers for bass boats and boats with high performance hulls running high horsepower outboard engines. They provide better "hole shot" performance with less steering torque and less vibration at high speeds as compared with 3-blade propellers.

An aluminum or stainless steel propeller

Aluminum propellers are inexpensive, easy to repair as compared with stainless steel propellers. Stainless Steel is more expensive, but much stronger and durable than aluminum propellers.

Check my motor's operating RPM range

Please operate your motor within the recommended RPM range. You can only check with a tachometer. There are various kinds commercially available.

Purpose of the rubber cushion hub in an outboard propeller

It is not intended to prevent blade damage as is sometimes assumed. This device protects lower unit parts by cushioning the shock of propeller impact. Its prime purpose, however, is to prevent excessive breakage of shear or drive pins that otherwise would occur due to the jolt or shock that is experienced in the process of shifting gears.

Thru-hub exhaust, over-hub exhaust, non thru-hub exhaust

thru-hub exhaust

Over/Thru-hub exhaust propellers are a combination of thru-hub and over-hub exhaust propellers. This allows some exhaust to escape at lower RPMs, providing a controlled amount of exhaust flooding. These types of propellers will allow the propeller to be slightly easier to turn during initial acceleration, allowing for a better hole shot on some engine/boat combinations.

over-hub exhaust

Over-hub exhaust propellers have the blades attached directly to the smaller tube that fits over the propeller shaft, eliminating the larger exhaust tube. These types of propellers are often used for attaining maximum top speeds. (On some boats, the hole shot can suffer due to extreme exhaust flooding that occurs around the propeller blades during acceleration.)

non thru-hub exhaust

Non thru-hub exhaust propellers are used for inboards using shaft driven propellers, sterndrives using through hull exhaust, and on some outboards that don't route the exhaust through the lower torpedo.
